

Aeroquip

Herber Aircraft – an Eaton Aeroquip Brand Distributor

Herber Aircraft has the honor of being the largest distributor of Eaton Aeroquip® brand products in the world. This is a responsibility that we take very seriously. Eaton Aeroquip brand offers the finest hose assemblies and clamps for aerospace and industrial applications. We distribute Eaton Aeroquip brand aerospace and industrial products, fittings, couplings, Marman® clamps, and Rynglok® hydraulic repair systems. We are also an FAA/Eaton Aeroquip brand-approved hose production facility and FAA/EASA-approved repair station (GS3R538L/EASA.145.4526).

Aerospace and Industrial Offerings

We stock FAA hose assemblies, bulk hoses and fittings, quick-disconnect couplings and swivel joints, and firesleeves and chafeguards for your aerospace applications. To best meet your needs, Teflon™ and rubber hose assemblies are built to manufacturer or custom specifications. For best practices, integral firesleeve Teflon hose assemblies are produced with vulcanized end caps. Cross references are available to most airframe manufacturers as well as to military and other standards.

For industrial applications we offer rubber or Teflon hose assemblies, bulk hoses and fittings, and quick-disconnect couplings and adapters. Ground support equipment hoses are built to manufacturer or your specifications.

Marman Clamps

Marman clamp offerings include V-band couplings, hand clamps, strap assemblies, joints, flanges and gaskets. These products are available in a wide selection of sizes and configurations, and with single or multiple latch couplings. In addition, brackets and attachments are available in channel-band or flexible coupling joints, in machined and sheet flanges, and with standard quick-disconnect and custom clamps.

Rynglok Tube Repair Systems

Rynglok products offered include industry-approved hydraulic tube repair systems that facilitate permanent repairs while tubing is still on the aircraft. The hydraulic tube repair system is available for all tubing materials and wall thicknesses; tooling is available for O.D. from 3/16" to 2". In addition, repair kits can be custom designed.

A Strong Partnership

We pride ourselves on having a strong partnership with Eaton Aeroquip brand; we have access to its computer data for up-to-the-minute updates on products, specifications, and technical assistance to ensure we provide you with the most current information. We also have two FAA-approved Designated Manufacturer's Inspection Representatives (DMIR) on staff to ensure product inspection and documentation compliance.
