

## Electrical Engine Harness Repair Service

Is your electrical engine harness no longer operational? Repair, rather than replace, your current engine harness. You can extend the life of your current harness by restoring it to “like new” condition with Herber Aircraft Service’s electrical engine harness repair service.

- All repairs are FAA-approved, not simply DER repair.
- Large savings over the purchase of a new OEM harness.
- Rapid turnaround time on repairs.
- Restored to “like new” condition with warranty on all repairs.

### Supported Types of Electrical Engine Harnesses:

- Engine gas temperature (EGT) thermocouple systems
- Igniter systems
- Full authority digital engine control systems
- Power management control systems
- Vibration monitoring systems
- Engine speed monitoring systems
- Fire detection and extinguishing systems

### Service Offerings:

- Diagnostic testing
- Complete strip down and rebuild
- Partial strip down and rebuild
- Wire replacement
- Partial or full re-braid (stainless steel, nickel-plated copper [EMI], Nomex, PEEK™, or other materials as required)
- Terminal end replacement
- Terminal box overhaul and harness re-assembly
- Connector and back-shell replacement
- Continuity and Hi-Pot testing
- Release to service with 8130-3 and C of C
- Standard turnaround time of two to three weeks after receipt
