LORD Shock and Vibration Control Products

Herber Aircraft is a distributor of LORD™ shock and vibration control products. LORD mounts are of the highest quality and include mounts for commercial and military aviation and General Aviation, and also mounts for industrial applications.

Avionic Shock Mounts

LORD Corporation low profile avionics mounts set the standard for compact, high-load, high capacity isolators. They are designed to support and protect avionics equipment in all types of aircraft. Inertial guidance and navigation systems and radar components are examples of applications where these mounts are used. In addition, AM Series mounts are used to isolate engine/aircraft accessories such as fuel controls, pressure sensors and oil coolers.

Multiplane Mounts

Standard stock multiplane mounts are recommended for the isolation of vibration. Lightweight and compact, they provide economical protection from lower frequency disturbances regardless of directions of the forces.

Platform Mounts

Standard stock platform mounts are widely used to efficiently isolate steady-state vibration and control for aviation and industrial applications. The contour of the flexing element was developed to provide uniform stress distribution. This plus high-strength bonding and the use of specially compounded elastomers, provides maximum service life.

Pedestal Mounts

Designed to protect delicate electronic equipment from damaging shock and vibration, these isolators are widely used in jet aircraft, missile, spacecraft and related ground support equipment. The low-profile design requires a minimum of headroom. Installation is simple; no special openings or tools are needed. Bonded in BTR elastomer, these mounts have high damping and a wide operating temperature range.

Sandwich Mounts

Flex-Bolt™ sandwich mounts from LORD are designed to protect equipment and machinery against damaging vibration. This family of mounts has excellent capacity for energy control. They are economical, compact and lightweight, and easy to install. Typical applications for Flex-Bolt sandwich mounts include business machines, motorcycles, heating, ventilating and air conditioning equipment, light motors, appliances, shipping containers, feeders, compactors and vibratory rollers.

Shipping Container Mounts

LORD shipping container mounts are for fragile, valuable products needing predictable, low- to medium-level protection. Bonded elastomeric shipping container mounts are simple, versatile, economical and easy to install.
